Binding declaration on the use of Glysofor F in the food sector

Glysofor F is based on 1.2 propylene glycol in combination with special corrosion protection additives.

All substances contained in Glysofor F have been approved as food additives (EU/USA) and have a very low oral toxicity.

Glysofor F does not contain any substances that are hazardous according to the evaluation procedure of EU Directive 1272/2008.

All contained substances are considered to be Generally Safe (GRAS = Generally Recognized As Safe) under the US Food and Drug Administration (FDA).

Glysofor F conforms to the FCC (Food Chemical Codex) and can therefore be used for applications with direct or indirect contact with food (specific concentration limits).

ABased on this classification, we guarantee that the product can be used safely as a heat transfer medium and antifreeze in the food industry.

Further information on the product can be found at www.glysofor.de.

Dirk Wittig
Managing Director

This statement refers to the current state of knowledge and the current legal basis. Regionally deviating and specific restrictions on use must be observed and checked by the user. It is the responsibility of the user to verify that the information contained in this declaration is relevant to his specific use scenario. If you have any questions about the possibilities of use, please contact our application engineering at info@glysofor.de.
